Thank you for purchasing the MXL FR-304M shotgun microphone. With proper care, this microphone will provide many years of satisfaction. For best results, please take a few moments to review this literature.

General Characteristics

The MXL FR Series shotgun microphones have been designed with high quality FET pre-amps, to ensure outstanding audio quality under even the most demanding conditions. The microphones body is precision made from high quality materials for durability as well as audio quality. The MXL FR-304M shotgun microphone can operate from either phantom power. (48V +/- 4V) or via an internal AA battery which will provide power for up to 100 hours.

To insert or replace the internal battery, turn the base of the microphone counterclockwise to unscrew. Slide the cover down to reveal the battery compartment. (The cover will not come off the end, do not try to force it or damage may occur.) Insert the battery as per the sticker inside the battery compartment. We recommend removing the battery when the microphone is not in use.

The FR-304M also features a 3 position switch with settings for Bat, Mute, and 48V. When operating from phantom power, ensure the switch is set to the 48v position. When operating from battery power, ensure the switch is in the Bat position. The Mute position is off, as well as muting the output. When operating from battery power a red LED will indicate the microphone is receiving power from the battery.

If for any reason you get no sound from your FR-304M microphone, check that phantom power is being correctly supplied, or that the battery has not become exhausted. In addition, check the cable between the microphone and camera.

Your MXL FR-304M shotgun microphone is supplied complete with the HSM-01 hot shoe mount to enable ease of mounting on most video cameras. In addition, a foam windscreen is provided for use in windy environments.

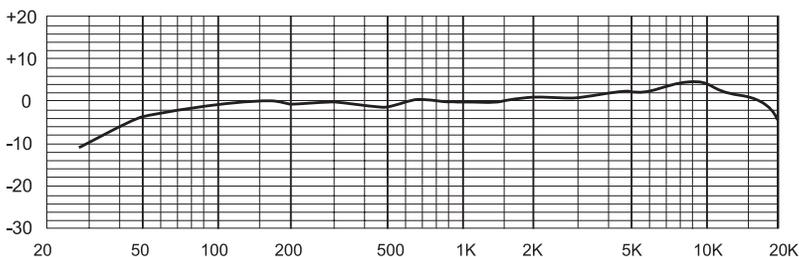

Microphone Cables

The microphone cable can have a profound effect on the sound of any microphone. Even the finest microphones will sound poor if the interconnect cable allows noise to enter, or causes distortion and loss of information. Use only the best microphone cable your budget will allow. We recommend using Mogami® brand cable.

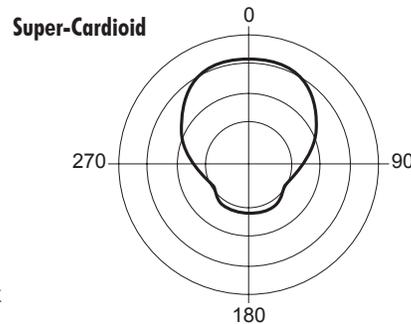

Care

Dust and foreign material can degrade the performance of a microphone over time so always store the unit in a warm dry place. Remove fingerprints from the exterior with a clean soft cloth.
