**Cut The Wires at Your Next Web Conference or Online Seminar With
the AC410 Wireless USB Boundary Microphone from MXL**

*MXL Microphones announces the addition of new wireless model to popular AC Series line of
USB web conferencing microphones.*

EL SEGUNDO, CALIF. – MXL Microphones, the Pro Audio division of Marshall Electronics, Inc., announces new line of wireless USB web conferencing microphones, introducing the AC-410W Wireless USB Boundary Web Conferencing Microphone, featuring the same three-capsule design of the popular AC-404 Boundary Microphone.

“The world is cutting the cord,” says Director of Multimedia Products, Perry Goldstein. “MXL is joining the trend by releasing a line of USB boundary web conferencing microphones. That means no more wires across the floor from the computer to the conference table. The AC-410W looks elegant and provides the intelligibility needed for important business conferences.”

The MXL AC-410W Wireless USB Boundary Microphone has a contemporary look plus a mute button and sensitivity switch. The AC-410W operates on a 2.4 GHz band, offering high point-to-point audio quality, with high speed, low latency audio transmission. The AC-410W Tx unit operates on AA disposable or rechargeable batteries, whereas the Tx unit connects via standard USB 2.0.

The MXL AC-410W is available now. For more information on the AC Series of web conferencing microphones, visit MXLmics.com.

About MXL Microphones:
